

### **Important Notice: October 6, 2020**

Yesterday, we were informed that a sibling (from Kiddy Kare downstairs) of one of our students has lice. Head lice are spread mostly by direct head-to-head contact. The sharing of hats, combs and other hair accessories, may also spread head lice, but this is rare. Head lice have nothing to do with cleanliness or parenting skills. We strongly encourage you to consult with your child's physician for recommendations on how to take precaution against the spread of lice. You can also visit

### **Aviso importante: 6 de Octubre de 2020**

Ayer, nos informaron que un hermano (de Kiddy Kare en la planta baja) de uno de nuestros estudiantes tiene piojos. Los piojos se transmiten principalmente por contacto directo de cabeza a cabeza. Compartir sombreros, peines y otros accesorios para el cabello también puede propagar los piojos, pero esto es raro. Los piojos no tienen nada que ver con la limpieza o las habilidades de los padres. Le recomendamos encarecidamente que consulte con el médico de su hijo para obtener recomendaciones sobre cómo tomar precauciones contra la propagación de piojos. También puede visitar
